Angel One is Preferred (61/100): named on 28 of 48 answers and cited on 13, strongest on Perplexity and weakest on Claude, where Zerodha owns the conversation.

INSIDE THIS REPORT

01

Executive summary

Key findings, the three moves to make first, where you stand on the maturity ladder.

02

AI search visibility

Engine-by-engine results, the buyer-funnel heatmap, prompts won and lost, rivals, citations, brand narrative.

03

Website health

Can the engines read and trust the site: crawlability, schema, E-E-A-T, technical SEO, page-level scores.

04

90-day plan

Every action sequenced Now / Next / Later with the score projected at each step and KPI targets.

05

Appendices

Methodology, scoring model, limitations and glossary.

01

PART 01

Executive summary

Scan scope: 12 prompts asked once each on ChatGPT, Gemini, Claude, Perplexity (48 answers). Angel One appeared in 28 of those answers and was cited in 13.

Key findings

- 1 Angel One appears in 58% of the 48 AI answers and is cited in 27%, placing it third in share of voice behind Zerodha (23%) and Groww (19%).
- 2 Perplexity is the strongest engine (75% mention rate, 6 citations); Claude is the weakest (42%), framing Angel One as a traditional, higher-cost broker.
- 3 The brand wins 7 of 12 prompts but loses all four decision-stage prompts on Claude and Gemini to Zerodha and Groww.
- 4 Only 23% of the 96 citations point at angelone.in; 46% go to third parties such as SEBI, Moneycontrol and Economic Times.
- 5 On-site: 58 pages sampled, health score 76 - heavy HTML (586 KB average), 115 scripts per page and no security headers are the main technical drags.

Top 3 immediate actions

Action	Business impact	Effort
Put "zero brokerage on delivery" on the pages the engines read	The claim is missing from every answer and Claude states the opposite.	~4h · +3 pts
Fix the broken internal links	Broken internal links: 2 of 100 checked.	~3h · +2 pts
Earn the citations zerodha.com holds on 5 of your prompts	Engines cite zerodha.com where you are mentioned but not cited.	~8h · +5 pts

How to read the GEO score

The GEO score (0-100) measures how strongly AI engines recommend a brand when buyers ask about its category. It combines four things: placement 35% (how early you are named among the brands in an answer), frequency 25% (how many answers name you), sourcing 25% (how many link to your own site) and framing 15% (how positively you are described). Scores fall into four bands: Absent 0-25 (rarely named), Present 26-50 (named but not first), Preferred 51-75 (a recommended option), Default 76-100 (the answer the engines give).

Where you stand

Angel One is in the Preferred band (61/100). The 90-day plan projects 74; doing nothing drifts to 57 as cited pages age.

Visibility depth - reach, position and sentiment

When Angel One appears in an answer: on how many engines, where it ranks, and how it is described.

ENGINE REACH 4 / 4 ChatGPT, Gemini, Claude, Perplexity	AVG POSITION #2.0 order among brands named	TOP-3 RATE 83% of appearances in the top 3	#1 RANK RATE 67% of appearances named first	SENTIMENT 17% positive 83% neutral · 0% negative
--	--	--	---	--

WHAT THIS MEANS

When Angel One does get named, it is named on 4 of 4 engines, on average in position #2.0 among the brands listed, and first 67% of the time. 17% of those mentions are positive in tone. Being named is only half the job - being named early and positively is what turns a mention into a recommendation.

The strategic imperative — Angel One is weak or invisible on Claude (42% of prompts), where Zerodha owns the conversation.

02

PART 02

AI search visibility

Angel One is a recommended option on every engine but the default on none; Perplexity cites it most, Claude names it least.

GEO audit - visibility by engine

Share of answers in which Angel One is named, per engine. Higher is better.

Engine	Answered	Mentioned	Cited	Avg position	Top rival	Prefers you
ChatGPT	12	8 (67%)	4	2.1	Zerodha (10x)	yes
Gemini	12	6 (50%)	2	2.8	Groww (9x)	yes
Claude	12	5 (42%)	1	3.4	Zerodha (8x)	no
Perplexity	12	9 (75%)	6	1.9	Upstox (7x)	yes

WHAT THIS MEANS

Angel One is named most on Perplexity (75% of answers) and least on Claude (42%). Across all engines it is cited as a source on 13 of 48 answers; Zerodha is the rival named most where Angel One is weakest.

Engine-by-engine breakdown

How to read this: Each card is one AI engine. The header shows the share of buyer questions on which the engine named you (green 50%+, amber 25%+, red below). "+" lines are what the engine already does for you, "-" lines are the gaps, and "Do next" is the single action that would move that engine most.

ChatGPT	67%	Gemini	50%
named on 67% of prompts · cited 4/12 · avg position 2.1 + Names Angel One on 67% of prompts + Cites your site on 4 answers - Named late - average position 2.1 - Zerodha named 10x Do next: Defend: keep cited pages fresh and expand into the funnel stages where you are not yet named.		named on 50% of prompts · cited 2/12 · avg position 2.8 + Names Angel One on 50% of prompts + Cites your site on 2 answers - Named late - average position 2.8 - Groww named 9x Do next: Defend: keep cited pages fresh and expand into the funnel stages where you are not yet named.	

Claude	42%	Perplexity	75%
named on 42% of prompts · cited 1/12 · avg position 3.4 + Cites your site on 1 answer - Names Angel One on only 42% of prompts - Named late - average position 3.4 - Zerodha named 8x Do next: Defend: keep cited pages fresh and expand into the funnel stages where you are not yet named.		named on 75% of prompts · cited 6/12 · avg position 1.9 + Names Angel One on 75% of prompts + Cites your site on 6 answers + Named early - average position 1.9 - Upstox named 7x Do next: Defend: keep cited pages fresh and expand into the funnel stages where you are not yet named.	

Funnel stage heatmap

Mention rate by buyer stage x engine (% of answers)

How to read this: Rows are the three stages of a buyer journey - TOFU (awareness: "what is..."), MOFU (evaluation: "which is better..."), BOFU (decision: "best X to buy"). Each cell is the share of answers at that stage, on that engine, that named you. Green is 67%+, amber 34-66%, red below 34%.

Stage	ChatGPT	Gemini	Claude	Perplexity	All engines
TOFU (4 prompts)	100% (4/4)	75% (3/4)	50% (2/4)	75% (3/4)	75% (12/16)
MOFU (4 prompts)	50% (2/4)	75% (3/4)	50% (2/4)	100% (4/4)	69% (11/16)
BOFU (4 prompts)	50% (2/4)	75% (3/4)	50% (2/4)	75% (3/4)	62% (10/16)

The AI dark funnel — when Angel One does not appear in these answers, prospects never discover it, even when they search for the exact problem it solves. A gap at BOFU is a lost decision; a gap at TOFU is a buyer who never hears the name.

WHAT THIS MEANS

Angel One is strongest at the TOFU stage (75% of answers) and weakest at BOFU (62%) - the decision stage, where a missing name is a lost sale.

- Best broker for options trading with low margin requirements · Zerodha
- Alternatives to Zerodha for long-term investors · Zerodha

Prompt evidence

How to read this: One row per buyer question. The coloured dot under each engine shows what happened: green = the engine named you and linked to your site, amber = named you without a link, red = did not name you, grey = no answer. "Cited instead of you" lists the sites the engine linked to. Gap type: Won = you were a top answer; Position gap = named but after the top three; Visibility gap = never named while rivals were; Educational = nobody is named, not a real gap.

7 won · 3 position gap · 0 visibility gap · 2 educational ● cited ● mentioned ● absent ● no answer

Competitor matrix

Zerodha and Groww are named more often and earlier; both own the decision-stage prompts.

Every brand the engines named - prompts it ranks in, and its average order of mention (1 = named first)

How to read this: "Prompts ranked" is how many of the buyer questions the brand was named on, out of all questions asked. "Avg position" is the order it was named in (1.0 = always first). The three stage columns split that by funnel stage. Your own row is highlighted.

Brand	Prompts ranked	Share	Avg position	TOFU	MOFU	BOFU
Zerodha	11 / 12	92%	1.3	4/4	3/4	3/4
Groww	9 / 12	75%	2.0	4/4	3/4	3/4
Angel One (you)	8 / 12	67%	2.4	3/4	3/4	2/4
Upstox	8 / 12	67%	2.2	3/4	2/4	2/4
ICICI Direct	6 / 12	50%	3.1	3/4	2/4	2/4
HDFC Securities	5 / 12	42%	3.4	2/4	1/4	1/4

Brand	Prompts ranked	Share	Avg position	TOFU	MOFU	BOFU
Kotak Securities	4 / 12	33%	3.8	2/4	1/4	1/4
Dhan	4 / 12	33%	4.0	2/4	1/4	1/4
5Paisa	3 / 12	25%	4.4	2/4	1/4	1/4

Zerodha - the BOFU default — named on 4 of 4 decision-stage prompts - the most common answer when buyers are ready to choose.

Groww - owns TOFU mindshare — named on 4 of 4 awareness-stage prompts - the highest of any brand at that stage.

Angel One - strongest on Perplexity — cited on 6 of 12 Perplexity answers, the best sourcing rate of any tracked brand there.

WHAT THIS MEANS

Angel One ranks #3 of 9 brands the engines named, appearing on 8 of 12 questions. Zerodha is the brand to beat: named on 11 questions at an average position of 1.3 - ahead of you on both counts.

Relative share of voice

Angel One sits at 74% of Zerodha, the loudest tracked brand (set at 100%).

Citation-source breakdown

Who owns the 96 URLs the engines cited on your prompts.

Top sources

- angelone.in - 22 citations
- zerodha.com - 14 citations
- sebi.gov.in - 11 citations
- groww.in - 9 citations
- moneycontrol.com - 8 citations
- economictimes.indiatimes.com - 6 citations

Root cause — Most citations point at other people's pages about you: comparison tables, pricing and FAQ pages on your own site are what engines cite.

WHAT THIS MEANS

When the engines back up an answer with a link, 23% of those links point at your own site, 31% at rivals and 46% at third parties; the single most-cited site is angelone.in (22 citations). The pages engines cite are the pages that shape what they say - owning more of them is the fastest way to change the story.

Brand narrative

Engines describe Angel One as a full-service, established broker with a strong app; the zero-brokerage delivery message is missing.

Not whether the engines name Angel One - how they describe it · 28 answers analysed

Dominant framing: Full-service broker with a strong mobile app and research (in 64% of answers) · consistency 71%

AI DESCRIPTORS (PRESENT)

MISSING DESCRIPTORS

- zero-brokerage delivery
- AI-powered SmartAPI
- margin trading facility
- IPO via UPI

FRAMING BY ENGINE

Engine	Leads with	Tone	Matches site
ChatGPT	full-service broker	Positive	Yes
Gemini	mobile app	Positive	Partial
Claude	traditional broker	Neutral	Partial
Perplexity	flat brokerage	Positive	Yes

Narrative gap — Rivals are framed as "low-cost and modern"; Angel One is framed as "full-service and established" - accurate, but the zero-delivery-brokerage message never reaches the answers.

Off-brand (Claude) — "Angel One charges higher brokerage than discount brokers" Delivery trades are free; the flat Rs 20 per order applies only to intraday and F&O.

03

PART 03

Website health

The site is fully crawlable with 97% schema coverage, but page weight, script count and missing security headers hold the health score at 76.

Findable · Cited · Chosen - scorecard

Thirteen measures behind the score, grouped by the three questions that matter: can the engines reach and read you (Findable), do they use you as a source (Cited), and are you the answer they give (Chosen).

How to read this: Each measure has a score out of 100 and a target. Green = at or above target, red = below. The priority chip says how urgent it is: Critical (well below target), Important (close), On track (met), Not measured (the audit could not collect that signal).

Pillar	Measure	Value	Score / target	Priority
Findable 61				
	AI crawlability	5 of 5 AI crawlers	100 / 80	On track
	Answer structure	schema on 97% · 5 of 7 key types	85 / 70	On track
	Page freshness	11 of 12 dated pages 12mo+	8 / 70	Critical
	Authority signals	bylines on 0% · 5.7 outbound citations/page	50 / 70	Important
Cited 48				
	Owned citation share	22.9%	33 / 70	Critical
	Competitor citation share	31.3%	55 / 70	Important
	Citation rate	27%	39 / 70	Critical
	Third-party reliance	45.8%	66 / 60	On track
Chosen 66				
	Mention rate	58% of runs	58 / 80	Important
	Placement	avg 2.4	72 / 80	Important
	Engine coverage	3 of 4	75 / 80	Important
	Negative sentiment	4%	92 / 80	On track
	Share of voice	16.6%	33 / 80	Critical

WHAT THIS MEANS

9 of 13 measured signals are below target. The biggest gap is page freshness (8 against a target of 70) - 11 of 12 dated pages 12mo+. Findable is what you control on your own site; Cited and Chosen move once the engines start reading and trusting it.

Website health scorecard

Site score 76 / 100 - eight weighted categories; unmeasured categories drop out of the weighting.

Category	Weight	Score	Priority	Evidence
AI crawlability	12%	100	On track	5 of 5 AI crawlers allowed · sitemap found
Structured data (schema)	20%	87	On track	schema on 97% of pages · 5 of 7 key types
Content depth	16%	91	On track	2677 words/page · question headings on 76% · tables on 47%
E-E-A-T signals	15%	44	Critical	bylines on 0% · 5.7 citations/page · Person schema on 3% · credentials on 88%
Internal linking	10%	95	On track	97.3 internal links/page · 97% descriptive anchors · 17 orphan candidates
On-page & technical SEO	10%	79	Important	0 missing titles · 2 missing descriptions · 11 without canonical · 2 of 100 links broken
Backlink authority	7%	71	Important	authority 58/100 · 6,412 referring domains · 412,880 backlinks
Content freshness	7%	8	Critical	11 of 12 dated pages older than 12 months
Core Web Vitals	3%	67	Important	LCP 3120 ms · CLS 0.04 · INP 310 ms (field data)

WHAT THIS MEANS

The site scores 76/100. Its strongest area is ai crawlability (100); the two areas dragging the score down are content freshness (8) and e-e-a-t signals (44). Fixing the lowest category first gives the biggest lift, because each category is weighted.

Backlink analysis

The links pointing at angelone.in shape how much the engines trust and cite it. Verified via a third-party link index; links seen since 2016.

AUTHORITY SCORE 58/100 how trusted the site is across the web	SITES LINKING IN 6,412 unique websites that link to you	TOTAL BACKLINKS 412,880 88% dofollow	BROKEN BACKLINKS 9,310 authority to reclaim with redirects
---	---	--	--

Core Web Vitals

Real-user data (CrUX, 75th percentile) for the homepage on mobile. Slow pages are crawled less often, so content updates reach AI indexes later.

LCP - LARGEST CONTENTFUL PAINT 3120 ms Needs improvement	CLS - LAYOUT SHIFT 0.04 Good	INP - INTERACTION DELAY 310 ms Needs improvement	CWV SCORE 67 Lighthouse performance 58
--	--	--	--

Mobile-friendly: yes

Indexability & security

Can search engines index the sampled pages, and is the site served safely.

INDEXABLE 57	NOT INDEXABLE 0	CANONICALISED ELSEWHERE 0	REDIRECTS 1	COULD NOT CHECK 2
------------------------	---------------------------	--	-----------------------	-----------------------------

Check	Result	Why it matters
http:// redirects to https://	yes	two reachable copies split authority and expose the insecure one
HSTS header	missing	tells browsers to always use HTTPS
SSL certificate	ok	a failing certificate stops crawlers and warns visitors
Certificate expiry	2026-12-18 (94 days)	issued by DigiCert Inc
Security headers	0 of 4 present	CSP, X-Content-Type-Options, X-Frame-Options, Referrer-Policy
Average HTML weight	585.6 KB · 114.8 scripts/page	heavy HTML slows first paint and crawling
Sitemap health	1,295 URLs listed · 60 checked · 1 with problems · 0 crawled pages not listed	a sitemap should list only live, indexable, final URLs
Near-duplicate page groups	2 groups · 4 pages	same body text on several URLs competes with itself

AI crawlability

AI crawler	Engine	Access	Impact
GPTBot	ChatGPT	Allowed	ChatGPT can index your content
ClaudeBot	Claude	Allowed	Claude can index your content
PerplexityBot	Perplexity	Allowed	Perplexity can index your content
Google-Extended	Gemini	Allowed	Gemini can index your content
GoogleOther	Google AI Overviews	Allowed	Google AI Overviews can index your content
robots.txt		present	
sitemap.xml		Present - index with 4 child sitemaps	lets crawlers discover new pages quickly
llms.txt		present	does not affect the score
Internal links checked		2 of 100 broken	/cdn-cgi/l/email-protection (404) · /investor-relations-disclosures-under-regulation-46 (404)

Content & schema signals

Signal	Value	What it means
Schema coverage	97% of pages	pages carrying JSON-LD; the types matter as much as the coverage
Key schema types	Organization, FAQPage, HowTo, BreadcrumbList, Person	FAQPage, HowTo, Product, Article, Person are what engines extract
Pages with author bio	0%	bylines are the trust signal engines look for
Outbound citations / page	5.7	cited sources make a page look researched
Average word count	2,677	depth, not length, wins citations
Question headings / tables	76% / 47%	answer-shaped structure is easiest to cite
Stale pages (12 months+)	11 of 12 dated	old pages lose citations fastest
Latest update seen	2026-02-05	
Internal links / page	97.3 · 97% descriptive anchors	crawlers follow internal links to find and rank pages; anchor text should say what the target is
Person schema / credentials	3% / 88% of pages	author entities and trust claims (awards, registrations, certifications) are E-E-A-T evidence

Technical SEO issues

1 critical · 13 warnings · 11 info - counted over the 58 sampled pages

How to read this: Critical issues stop pages from ranking or being cited and should be fixed first; warnings cost visibility or speed; info items are polish. "Pages" is how many sampled pages have the issue. Under each fix is the exact tag, header or setting to add.

WHAT THIS MEANS

25 issue types were found across 58 sampled pages; 1 are critical - start with "Fix the broken internal links". The Issues CSV next to the report lists every affected URL for your developer.

Severity	Issue	Pages	Examples	Fix
Critical	Broken internal links	2 / 100	angelone.in/cdn-cgi/l/email-protection (404) · angelone.in/investor-relations-disclosures-under-regulation-46 (404)	Fix the broken internal links. Links to pages that return errors send crawlers and buyers to dead ends. fix the target page or change the link; 301 old URLs that moved
Warning	HTML over 300 KB	45 / 58	/ · / · /open-demat-account	Slim the HTML. A huge HTML document slows first paint and crawling before a single image loads. move inline scripts/styles to files, remove hidden markup, paginate long lists
Warning	Pages without a canonical tag	11 / 58	/aboutus · /authorised-person/authorised-person-meaning · /be-a-mutualfund-authorised-person	Add a self-referencing canonical to every page. Without a canonical, tracking parameters and duplicates split the page's authority. <link rel="canonical" href="https://www.example.com/this-page/">
Warning	Pages where 20%+ of images lack alt text	11 / 58	/company-annual-results · /authorised-person/authorised-person-meaning · /authorised-person/benefits-of-being-a-authorised-person	Add alt text to images. Alt text is how crawlers and AI engines read images; missing alt is also an accessibility failure.

Severity	Issue	Pages	Examples	Fix
Warning	Images without width/height	9 / 58	/company-annual-results · /authorised-person/eligibility-qualification · /be-a-mutualfund-authorised-person	Add width and height attributes to images. Images without dimensions cause layout shift (CLS) while they load. <code></code>
Warning	Pages without an H1	4 / 58	/insurance · /a1e1 · /authorised-person/details-of-ap	Add a single H1 to every page. The H1 tells engines what the page is about; every page needs exactly one. <code><h1>The page topic, once</h1></code>
Warning	Near-duplicate pages	4 / 58	/ · / · /investor-relations/financials	Merge or canonicalise duplicate pages. Pages with the same body text compete with each other; keep one and canonicalise or merge the rest. <code><link rel="canonical" href="https://www.example.com/the-one-to-keep/"></code> on the copies, or merge them
Warning	Pages without a meta description	2 / 58	/disclosure · /escalation-matrix	Add a meta description to every page. Engines fall back to whatever text they find; a description is the summary you control. <code><meta name="description" content="One or two sentences, 70-160 characters, that say what the page offers."></code>
Warning	Pages sharing a title	2 / 58	/ · /	Make every page title unique. Duplicate titles make pages compete with each other and look like duplicates to crawlers. give each page its own <code><title></code>
Warning	Pages sharing a meta description	2 / 58	/ · /	Make meta descriptions unique. A description that repeats across pages is ignored; write one per page. give each page its own meta description
Warning	Invalid JSON-LD blocks	2 / 58	/open-demat-account · /open-demat-account-hindi	Fix the JSON syntax of the structured data. A JSON-LD block that does not parse is ignored entirely - the schema might as well not be there. validate the block at https://validator.schema.org - usually a trailing comma or an unescaped quote
Warning	Pages with more than one H1	1 / 58	/margin-trading-facility	Keep one H1 per page. Several H1s dilute the page topic; keep one and demote the rest to H2. keep one <code><h1></code> ; change the others to <code><h2></code>
Warning	Sitemap URLs that error, redirect or are noindexed	1 / 60	/ (redirects)	Clean the sitemap. A sitemap should list only live, indexable, final URLs; anything else wastes crawl budget and trust. remove URLs that 404, redirect or carry noindex from <code>sitemap.xml</code>
Warning	Broken outbound links	1 / 22	bsecrecs.bseindia.com/ecomplaint/frmInvestorHome.aspx (404)	Replace or remove dead outbound links. Citing a dead source hurts the trust signal a citation is meant to give. replace the link with a live source, or remove it

The full list of affected URLs is in the CSV export (Issues CSV) next to the report.

Internal link opportunities

Pages that talk about another page's topic but never link to it - add a contextual link.

Winning content patterns

The three page shapes AI engines cite most often, and whether your sampled pages use them.

Question headings with a short answer block present · question-shaped headings on 76% of sampled pages Open each section with the question buyers ask, then answer it in 1-3 sentences before the detail; engines lift these blocks verbatim.	Statistics and cited sources in the opening paragraphs present · 5.7 outbound citations per page on average (target 5) Put a number and its source in the first 500 words ("According to X, 41% of ..."); front-loaded facts are what crawlers extract first.	Comparison tables and feature matrices present · tables on 47% of sampled pages Tables that compare you with rivals or with the old way of doing things are the most extractable content on the web.
--	--	---

Page-level scores

Readiness of each sampled page: does it carry schema, a byline, citations and a date (25 points each).

How to read this: "Ready" is the page's citation-readiness score out of 100: 25 points each for structured data, an author byline, at least three outbound citations, and a visible update date. "Links" is how many internal links the page carries. "On-page" flags the technical problems found on that page; "clean" means none.

Page	Words	Schema	Author	Citations	Updated	Ready	Links	On-page
/	2,051	BreadcrumbList, ContactPoint, GeoCoordinates, ListItem, Organization, Person, PostalAddress, SearchAction, WebPage, place	-	9	—	50	190	1 redirect

04

PART 04

90-day plan

Three fixes in the first month lift the projection from 61 to 66; the full plan reaches 74 within 90 days.

Visibility plan - Now / Next / Later

Every gap's action, sequenced, with the score projected at each step. Lifts are nominal; the projection applies headroom and confidence.

How to read this: Now = the first month, small tasks that stop the bleeding. Next = months two and three, the biggest answers to win. Later = widening the lead. "Lift" is the GEO points an action is worth once done; "Effort" is a rough number of working hours; "Owner" is who usually does it.

WHAT THIS MEANS

Doing everything in this plan takes Angel One from 61 to about 74 within 90 days; doing nothing drifts to 57 as the pages the engines cite go stale.

When	Action	Why	Owner	Lift	Effort
Now 61 > 66	Stop the bleeding				
	Put "zero brokerage on delivery" on the pages the engines read	The claim is missing from every answer and Claude states the opposite.	Content	+3	~4h
	Fix the broken internal links	Broken internal links: 2 of 100 checked.	Dev	+2	~3h
	Earn the citations zerodha.com holds on 5 of your prompts	Engines cite zerodha.com where you are mentioned but not cited.	Content	+5	~8h
Next 66 > 71	Win the biggest answers				
	Publish comparison pages for the 4 decision-stage prompts you lose	Claude and Gemini name Zerodha and Groww on every BOFU prompt.	Content	+4	~12h
	Slim the HTML and cut scripts on the top 20 pages	HTML over 300 KB: 45 of 58 sampled pages; 115 scripts per page.	Dev	+2	~10h
	Add author bylines and outbound citations to the knowledge-center articles	Bylines on 0% of pages; 5.7 citations per page.	Content	+4	~12h
Later 71 > 74	Widen the lead				
	Push 11 striking-distance keywords into the top 10	Positions 11-20 already rank; a refresh moves them.	Seo	+2	~10h
	Send the standard security headers	Missing security headers: 4 of 4.	Dev	+1	~2h
	Earn citations from the sources the engines already trust	Third-party pages carry 46% of citations on your prompts.	Outreach	+3	~14h

KPI scorecard - 30-day and 90-day targets

Metric	Baseline	30-day target	90-day target	Tracked via
GEO score	61/100	66/100	74/100	audit re-run, same prompts
Mention rate	58%	68%	83%	prompt sampling on every engine
Owned citation share	23%	33%	48%	citation control on the same prompts
Engines preferring you	3/4	4/4	4/4	engine-level mention rate > 50%

Quick wins - ranked by impact

#	Action	Expected impact	Lift	Effort
1	Earn the citations zerodha.com holds on 5 of your prompts	Engines cite zerodha.com on 5 prompts where you are mentioned but not cited, or absent.	+5 pts	~8h
2	Publish comparison pages for the 4 decision-stage prompts you lose	Claude and Gemini name Zerodha and Groww on every BOFU prompt; a "Angel One vs" page per prompt gives them something to cite.	+4 pts	~12h
3	Put "zero brokerage on delivery" on the pages the engines read	The claim is missing from every answer and Claude states the opposite.	+3 pts	~4h

05

PART 05

Appendices

How this audit was run, how the score is built, what it cannot tell you, and the terms used throughout.

Methodology

12 prompts were generated from angelone.in and asked once each on ChatGPT, Gemini, Claude, Perplexity on 15 Sep 2026. Prompts span the buyer funnel - TOFU (awareness), MOFU (evaluation), BOFU (decision) - and were written from the site's own pages so they reflect what its buyers actually ask. One run per engine means low statistical confidence by design - AI answers vary run to run; the product re-asks each prompt several times and reports rates, not single results. SEO data comes from PromptMaxx's own SERP pipeline; keyword volume from DataForSEO. On-site signals come from a plain-HTTP sample of 58 pages (schema, bylines, outbound citations, dates); no rendering, no user data. Google AI Overviews are not yet tracked.

Scoring model

The GEO score runs from 0 to 100 and is a weighted sum of four components measured across every answer read: placement (35%) - the order in which the brand is named among the brands in an answer; frequency (25%) - the share of answers that name it; sourcing (25%) - the share that cite its own site; framing (15%) - how favourably it is described where it is named. Bands: Absent 0-25, Present 26-50, Preferred 51-75, Default 76-100. The Findable / Cited / Chosen measures each have a target; targets are the model's ceilings, not industry averages. The same formula scores tracked projects, so an audit score and a project score mean the same thing.

Limitations

This audit is a point-in-time capture on 15 Sep 2026. 12 prompts is a directional sample, below the 30-100 prompts used for statistically stable rates. AI engines are stochastic: the same prompt re-run tomorrow can surface a different set of brands. Brand and rival names are extracted automatically from the answers and may occasionally be mislabelled. Parts of this report are written by a language model from the audit's numbers; every claim is traceable to a table in the report, but treat the prose as a starting point for discussion, not the final word.

Glossary

Term	Definition
AI visibility	How often a brand appears in the answers AI engines (ChatGPT, Gemini, Claude, Perplexity, ...) give to buyer questions. Measured as mention rate and share of voice over a set of prompts.
GEO score	A 0-100 score built from placement (35%), frequency (25%), sourcing (25%) and framing (15%) across every answer read. Bands: Absent 0-25, Present 26-50, Preferred 51-75, Default 76-100.
Mention rate	Share of answers in which the brand is named at all.
Citation	An answer that links to (or names a URL on) the brand's own site. Being cited is stronger than being mentioned: the engine is using you as its source.
Share of voice	The brand's mentions as a share of all brand mentions across the answers - you versus every rival the engines named.
Funnel stage	Where a prompt sits in the buyer journey: TOFU (awareness), MOFU (evaluation and comparison), BOFU (decision).
Gap type	Why a prompt is lost. Visibility gap: never named while rivals are. Position gap: named, but never in the top three. Educational: nobody is named, so it is not a real gap.
Findable / Cited / Chosen	The three questions behind the measures: can the engines reach and read you; are you the source they use; are you the answer they give.

Term	Definition
Schema (JSON-LD)	Structured data on a page that tells engines what each block is (an FAQ, a product, an author). Engines extract and cite structured answers more readily.
llms.txt	An optional plain-text file at the site root that tells AI crawlers what the site is about and where the important pages are.
Owned citation share	Of every URL the engines cited on your prompts, the share that points at your own site rather than a rival's or a third party's.
Website health score	A 0-100 site score from eight weighted categories: AI crawlability, structured data, content depth, E-E-A-T signals, internal linking, on-page & technical SEO, content freshness and Core Web Vitals. Unmeasured categories drop out of the weighting.
E-E-A-T	Experience, Expertise, Authoritativeness, Trust - the signals engines use to decide whether a page is worth citing: author bylines, cited sources, Person schema and credential claims.
Authority score	A 0-100 estimate of how trusted a site is across the web, from the number and quality of sites linking to it (a third-party link index; scale comparable to Ahrefs DR / Moz DA).
Core Web Vitals	Google's real-user speed metrics: LCP (how fast the main content shows), CLS (how much the layout jumps), INP (how fast the page reacts to a tap). Measured for the homepage on mobile.
Canonical tag	A page's declaration of its master URL, so tracking parameters and duplicates do not split its authority.
Orphan page	A page no other sampled page links to; crawlers reach it only from the sitemap and it gets no internal authority.
